PROFESSIONAL SUMMARY

Senior Backend Engineer with 7 years of experience building scalable distributed systems, cloud-native applications, and enterprise SaaS platforms. Expertise in Python, FastAPI, Django, PostgreSQL, MongoDB, Docker, Kubernetes, AWS, and microservices architecture. Proven track record of reducing API latency by 40%, improving database performance by up to 50%, and delivering highly available production systems. Strong focus on automation, CI/CD, observability, platform reliability, and secure software development.

CORE SKILLS

Python, FastAPI, Django, Flask, REST APIs, PostgreSQL, MongoDB, Redis, RabbitMQ, Elasticsearch, Docker, Kubernetes, AWS, CI/CD, GitHub Actions, Microservices, Distributed Systems, Event-Driven Architecture, System Design, Automated Testing, Monitoring, Observability, Performance Optimization, Multi-Tenant Architecture.

PROFESSIONAL EXPERIENCE

Senior Backend Engineer (Python) | Bluethink IT Consulting Pvt. Ltd. | Feb 2021 – Jan 2026

- Reduced API response latency by 40% and increased platform throughput by redesigning backend services using FastAPI, asynchronous processing, Redis caching, and optimized database access patterns.
- Improved PostgreSQL and MongoDB performance by 30–50% through schema optimization, indexing strategies, aggregation tuning, and performance profiling.
- Designed and operated distributed microservice architectures enabling independent service scaling, fault isolation, and high availability across enterprise SaaS platforms.
- Processed millions of background jobs with near-zero failure rates using Celery, RabbitMQ, automated retry mechanisms, and resilient event-driven workflows.
- Improved deployment reliability through Docker, Kubernetes, AWS, CI/CD pipelines, automated testing, monitoring, and observability practices.
- Enhanced customer data security through role-based access controls, secure multi-tenant architecture, structured logging, and incident analysis practices.

Python Backend Developer | Independent Contractor | Jan 2019 – Jan 2021

- Delivered 8+ backend software projects across SaaS, logistics, booking, and e-commerce domains with a 100% project delivery success rate.
- Built scalable REST APIs, workflow automation systems, and data pipelines using Python, Django, and PostgreSQL.
- Developed multi-tenant platforms supporting hundreds of active users while maintaining secure customer data isolation and high availability.
- Improved application reliability through database optimization, caching strategies, automated testing, and production troubleshooting.

KEY PROJECTS

Security Automation & Compliance Platform – Python, FastAPI, PostgreSQL, Elasticsearch, RabbitMQ

- Developed a centralized security automation platform to aggregate, classify, and track security findings across distributed services.
- Implemented RBAC, audit logging, and compliance reporting workflows to improve security governance, traceability, and access control management.
- Built event-driven remediation pipelines using RabbitMQ and Elasticsearch, reducing manual investigation effort and accelerating incident response workflows.

Cricket Fantasy Sports Platform – RabbitMQ, Celery, PostgreSQL, WebSockets

- Built backend systems supporting thousands of concurrent users during live sporting events.

Transportation Management System – FastAPI, PostgreSQL, Elasticsearch, AWS

- Designed multi-tenant logistics services with real-time tracking and operational search capabilities.

EDUCATION

M.Sc. Artificial Intelligence – De Montfort University Dubai (2026)

B.Tech. Computer Science – JSS Academy of Technical Education, Noida (2021)
